

The Madonna Archive

The pages in this document are intended as a catalog of the images that I have had scanned recently and are now offered for sale in digital format.

The quality of the images here is not representative of the digital prints that are made from these scans. Due to the nature of the Adobe Acrobat Distiller, the program that created this document, many of the images are displayed with pixelation and poor contrast. The only remedy available would be to create a massive document of over 200mb.

So in the interest of time and for ease of downloading I am offering this .pdf file as it is. If there is serious interest in a particular image, email your wish and I will send a larger .pdf document that would better display only the images you are interested in..

Mostly, the black and white images lose their contrast when displayed in a screen optimized .pdf (250k per page) the images look much closer to the original when a print optimized .pdf is created (7.5mb per page)

All images are digitized and printed to 25 cm wide and 25 cm or 38 cm deep, depending on the format of the original film.

The print material is Fujicolor Frontier Crystal Professional and is rated for 60 year display.
